

GREYS Staff Portal

The Complete Guide — for Employees and Managers

Covers the staff portal home page, the public schedule page, and the manager console: notes & specials, events, reservations, the calendar, schedules and shifts, time-off requests, shift swaps, weekly availability, notifications, announcements, new-hire onboarding, and CSV imports.

July 2026 · screenshots use sample data

How the portal fits together

The portal is made of **three pages** that share one database. Each page is aimed at a different audience and requires a different level of access:

- **Staff portal** (`index.html` — the main page at **staff.greyscheese.com**). View-only home base for everyone: pinned notes, weekly specials, events, the month calendar, reservations, "Stuff to Know," and the new-hire onboarding form. No login of any kind.
- **Schedule page** (`schedule.html`). The weekly staff schedule. **Anyone can view the full schedule — no login needed.** Typing your employee ID (no password) additionally unlocks your personal week, time-off requests, shift swaps, weekly availability, and notification settings.
- **Manager console** (`manager.html`). Password-protected. Managers create everything staff see, build and publish weekly schedules, and handle time-off requests, swap approvals, announcements, and onboarding submissions.

Locations. The business has three locations — **Memphis**, **Nashville**, and **Franklin**. Every note, special, event, shift and employee belongs to one location. Staff pages have location tabs at the top; your choice is remembered on your device. **Nashville and Franklin share one staff pool:** staff at either site see both sites' schedules together (shifts tagged NSH / FRK), while Memphis stays separate.

Who can do what. Reading data is open (the pages read the database directly). Anything that changes data for other people — adding content, shifts, approving requests, sending announcements — goes through the manager console and requires the manager password. The only things staff can submit are: a time-off request, a shift-swap request, their own availability, their own notification email/phone, and the onboarding form.

Tip: Everything below is shown with sample data. Names, shifts and reservations in the screenshots are examples, not real records.

Part 1 — The Staff Portal (everyone)

This is the page staff open day to day. It is **phone-first** — designed for a phone in a pocket, though it also works on a desktop. Nothing here requires a login.

1.1 The home screen

The staff portal home screen (phone). Numbered areas are described below.

- 1 Header.** Shows the brand and the location you are viewing ("GREYS Memphis"). The title updates when you switch locations.
- 2 Location switcher.** Three buttons — Memphis, Nashville, Franklin. Tapping one reloads the page showing that location's content. Your choice is saved on the device and used on every visit (and by the Schedule page too).
- 3 Pinned notes.** Notes a manager has posted (e.g. a door-code change). A note with extra detail shows a small arrow — tap the card to expand or collapse the full text (see 1.2).
- 4 Section tiles.** The main navigation. **Tap once** to open a quick inline preview under the tiles; **tap the same tile again** to open the full section. "Stuff to Know" opens directly with one tap. The **Schedule** tile leaves this page and opens the schedule page (Part 2). "Onboarding" is labeled *Soon*; its preview says coming soon, but a second tap opens the working new-hire form (section 1.9).
- 5 Manager lock.** Shortcut to the manager console (Part 3). Staff can ignore it — it only leads to a password screen.
- 6 Home button.** Always floating at the bottom of every section — returns to this home screen from anywhere.

1.2 Notes

Notes are standing reminders that stay up until a manager removes them. A note is just a title, or a title plus details:

Tapping a note with details expands it; the arrow flips. Tap again to collapse.

1.3 Tile previews

The first tap on a tile opens a compact preview without leaving home — handy mid-shift. Each preview has a **"View all "** link to the full section. Previews exist for Specials, Resys, Calendar, and Events.

Specials preview after one tap on the tile (1). "View all " (2) or a second tap on the tile opens the full section.

1.4 Specials

Shows this week's food & drink specials, **Monday through Sunday**. Each card shows the day (or date range), an optional time, the name, and details. Three kinds of entries appear:

- **One-day specials** — show on their date. Today's special is starred "Today".
- **Range specials** — have a start and end date (e.g. a special running all week). While active they are marked "Now".

- **Repeating specials** — weekly, every-2-weeks, or monthly (e.g. Taco Tuesday), shown with a repeat label, until their end date if the manager set one.

The full Specials view. Back arrow (1) returns home; a special card (2) shows day, time, repeat, and details.

1.5 Resys (reservations)

Live restaurant reservations, pulled from the booking system for the location you have selected. The preview groups reservations into **This Week** (Mon–Sun) and **Future**; the full view adds filters and a complete list.

- 1 Filters.** From / To date range (defaults to today +60 days) and a status filter: Reserved, Seated, Finished, Cancelled, No Show. Press **Apply** to reload.
- 2 Stats line.** Total reservations and total guests for the current filter.
- 3 Reservation cards.** Time and date, guest name, party size, source (Online / Staff-entered / Walk-in), tappable phone and email links, and any note the guest left for the team. Cancelled bookings show struck-through.
- 4 Requests needing approval.** Nashville & Franklin take manual-approval requests: a booking arriving as **NEEDS APPROVAL** gets Approve / Decline buttons right on the card. Approving confirms the guest (they are notified automatically); declining can include an optional reason the guest may see. This works from the staff page — no manager password needed — so the floor team can clear requests quickly.

The Resys view: filters (1), stats (2), reservation cards (3), and a request awaiting approval with its Approve / Decline buttons (4).

1.6 Calendar

One agenda for everything happening at your location, listed day by day from today to the end of the month. Use < > to change months and **Today** to jump back. Rows are tagged by type:

- **Special** — kitchen specials that day · **Event** — events with time
- **Class / Ticketed** — ticketed events and classes sold on the website, pulled in automatically through the API feed (never entered by hand), with live booked/capacity counts (e.g. "8/12 booked")
- **Reserved / Cancelled** — reservations with time, name and party size (cancelled shown struck-through)
- **Schedule** — dated schedule entries · **Time Off** — staff with approved time off

The Calendar agenda: month navigation (1), a day block (2), and type tags on each row (3).

1.7 Events

All upcoming events for the location, soonest first — with date (or range), time, repeat label for recurring events, and details. Past events stay visible but dimmed and marked "Past".

Important distinction: this section (and the "event" content type managers enter in the console) is only for **non-ticketed** happenings — trivia night, a private buyout, a staff party. **Ticketed events and classes sold on the website are NOT entered here:** they flow into the portal automatically through the ticketing API feed and appear on the Calendar as Class / Ticketed rows with live booked/capacity counts (section 1.6). Entering a ticketed event here by hand would just duplicate it.

The Events view. Recurring events (biweekly, etc.) list each upcoming occurrence.

1.8 Stuff to Know

A quick-reference board: who is on call, Wi-Fi passwords, checklists — whatever the manager posts as "info" content. Opens directly with a single tap on its tile.

Stuff to Know: simple labeled cards, always current.

1.9 Onboarding (new hires)

A new hire fills this out once, before their first shift. It is reached by tapping the Onboarding tile twice. The submission goes **privately to management** (Part 3.8) — nothing is shown to other staff. Sections of the form:

- **Personal & contact** — legal name (1, required), preferred name, date of birth, phone, email, home address, emergency contact.
- **Availability** — tap the days you can work (2) and describe typical hours.

- **Start details** — available start date and shirt size.
- **Direct deposit** — bank, routing, account, account type. Stored securely, visible only to management.
- **Tax & ID** — SSN for the W-4 and an optional photo of a government ID. **The photo does not replace the in-person I-9 check** — the original document must still be shown to a manager on day one (the form says so).
- **Acknowledgements** — handbook, safety & food-handling, accuracy — then a typed-name signature (3) and Submit (4).

Announcements

Holiday hours next week
We close at 9pm Mon-Wed next week for the floor refinish. Evening shifts end an hour early.
Jul 15

New POS training
Quick 20-minute walkthrough before open on Friday. Coffee on us.
Jul 10

Approved days show on the schedule automatically.

The schedule page before logging in. Everything shown here is visible to anyone.

- 1 **Week navigation.** < > move a week at a time; **Today** jumps back to the current week. The label shows the Mon–Sun range.
- 2 **"See your own shifts" login.** Type the employee ID your manager gave you (any text — a number, initials, a nickname; not case-sensitive) and press **View my shifts**. No password. Your ID is remembered on the device so you stay signed in next visit. Wrong or unknown IDs get a clear error ("Ask your manager to add you").
- 3 **Full schedule grid.** Everyone's shifts for the visible week — one row per active employee, one column per day. Green chips show start–end times and role; red **OFF** badges show approved time off. Today's column is tinted. On a phone the grid scrolls sideways.
- 4 **Announcements.** The latest manager announcements for your location (also emailed/texted when sent). Visible without login.
- 5 **Location tabs.** Same as the portal. Nashville and Franklin show a combined header ("Nashville · Franklin") because they share one staff pool.
- 6 **Portal link.** Back to the main staff portal.

2.2 Logging in with an employee ID

 **See your own shifts**

Enter the employee ID your manager gave you to see your week and request time off. No password needed.

maya01

View my shifts

Enter your employee ID and press "View my shifts."

If your ID exists at another location, the page switches to that location automatically. After login a **"Not you?"** button appears in the header — it signs the device out so a coworker can enter their own ID (7 in the next figure).

2.3 The logged-in page at a glance

Logging in reveals five personal cards and highlights your row in the grid:

The full page once logged in (shown as three strips, top to bottom). Numbers below.

- 1 My week** — your shifts only (section 2.4).
- 2 Your row highlighted** in the full-schedule grid.
- 3 Request time off** (section 2.6).
- 4 Shift swaps** (section 2.7).
- 5 My weekly availability** (section 2.8).
- 6 Notifications** (section 2.9).
- 7 "Not you?"** — log this device out.

2.4 My week

Swap

"Maya's week": total hours and shift count (1), each shift with role and note, and a Swap button (2) on upcoming shifts.

1 Hours summary — total hours and number of shifts this week, computed from your shift times.

2 Swap — offer this shift to a coworker (section 2.7). Only shown on today's and future shifts.

Days with approved time off show an **"Approved off"** pill. If you somehow have a shift on an approved-off day, the shift shows with an "off?" flag so you and the manager can sort it out.

2.5 Reading the full grid

Full schedule							
EMPLOYEE	MON 7/13	TUE 7/14	WED 7/15	THU 7/16	FRI 7/17	SAT 7/18	SUN 7/19
Dre Willis Kitchen					12p–8p Kitchen		
Jordan Pratt Server				OFF	4p–10p Server		10a–3p Server
Maya Johnson Server	11a–4p Server			4p–10p Server		10a–3p Brunch	
Sam Lee Kitchen		9a–3p Kitchen		9a–3p Kitchen		9a–4p Kitchen	
Tori Alvarez Bar		5p–11p Bar		5p–11p Bar	OFF	OFF	

The full-schedule grid on a wider screen: OFF badge (1), shift chip with time and role (2), today's column highlighted (3).

Full schedule							
EMPLOYEE	MON 7/13	TUE 7/14	WED 7/15	THU 7/16	FRI 7/17	SAT 7/18	SUN 7/19
Ben Ives Kitchen						9a-3p FRK Kitchen	
Kate Monroe FOH					11a-5p NSH FOH	11a-5p FRK FOH	

Nashville / Franklin share one staff pool: the same roster appears on both tabs, with each shift tagged NSH or FRK (1); the header shows both locations (2).

Tip: Time-off OFF badges are matched to grid rows **by name**. If your name on a request doesn't match the roster spelling, the badge won't show — managers keep these consistent.

2.6 Requesting time off

Request time off

START

07/16/2026

END (OPTIONAL)

mm/dd/yyyy

REASON (OPTIONAL)

e.g. vacation

Submit request

Jul 24 – Jul 26

"vacation"

PENDING

Jul 4

"July 4th"

DENIED

Request time off: start date, optional end date and reason, then Submit. Your recent requests appear below with status badges.

Pick a start date (today is pre-filled), optionally an end date for multi-day requests and a short reason, and press **Submit request**. Your name is taken from your login — no typing it. The request goes to the manager's **Time-Off Requests** tab as **pending**.

Below the form you see your last 8 requests with a badge: **pending** (yellow), **approved** (green) or **denied** (red). Approved days automatically show as OFF on the schedule grid, on your week, and on the portal calendar. The date picker stops you submitting an end date before the start date.

2.7 Shift swaps

A swap moves one of your shifts to a coworker — with three checkpoints: **you offer they accept the manager approves**. Nothing changes on the schedule until the manager approves; then the shift moves and both people get an email.

The screenshot shows a 'Shift swaps' card. At the top, there's a header with a double arrow icon and the title 'Shift swaps'. Below this, a brief instruction says: 'Tap **Swap** on one of your shifts above to offer it to a coworker. Swaps take effect once your manager approves.' The card is divided into two main sections. The first section is titled 'FOR YOU TO ANSWER' and contains an offer from 'Jordan Pratt offered you a shift' for 'Jul 17 · 4p–10p · Server' with the note 'family thing came up'. To the right of this offer are two buttons: 'Accept' (green) and 'Decline' (red). The second section is titled 'YOUR REQUESTS' and shows a request 'To Tori Alvarez' for 'Jul 18 · 10a–3p · Brunch'. To the right of this request is a yellow button that says 'ACCEPTED — AWAITING MANAGER' and a grey 'Cancel' button.

The Shift swaps card. "For you to answer" lists offers made to you (Accept / Decline). "Your requests" tracks offers you sent, with status and a Cancel button while still open.

The screenshot shows the 'Offer this shift' form. At the top, it says 'Offer this shift' followed by 'Thursday, Jul 16 · 4p – 10p · Server · Memphis'. Below this is a section labeled 'OFFER TO' with a dropdown menu showing 'Dre Willis — Kitchen'. A red circle with the number '1' is next to this dropdown. Below the dropdown is a section labeled 'NOTE (OPTIONAL)' with a text input field containing 'e.g. family thing came up'. A red circle with the number '2' is next to this input field. At the bottom, there are two buttons: 'Request swap' (orange) and 'Cancel' (grey). A red circle with the number '3' is next to the 'Request swap' button.

Offering a shift: pick the coworker (1), add an optional note (2), send (3).

Statuses you will see on your requests: **waiting on them** (coworker hasn't answered), **accepted — awaiting manager, approved** (done — shift moved), **denied by manager, declined** (coworker said no), **cancelled** (you withdrew it). You can cancel any request that isn't decided yet.

2.8 My weekly availability

 **My weekly availability**

Tell your manager when you can't work (or when you'd love the hours). This repeats every week — leave times blank for all day.

Mon	Available ▼		
Tue	Available ▼		
Wed	Prefer to work ▼	04:00 ⌚	10:00 ⌚
Thu	Available ▼		
Fri	Available ▼		
Sat	Available ▼		
Sun	Can't work ▼	--:-- ⌚	--:-- ⌚

Save availability

Weekly availability: per weekday choose Available, Can't work, or Prefer to work — optionally limited to a time window. Save applies it every week.

This is a **standing weekly pattern**, not a one-off (use time-off requests for specific dates). For each day choose **Available** (default), **Can't work**, or **Prefer to work**; leave the times blank for all-day, or set a window (both times required if you set one). Your manager sees this right inside the schedule builder — grey "unavail" chips and green "prefers" chips — and gets a warning if they schedule you during a can't-work window.

2.9 Notifications

 **Notifications**

Add your email or mobile number to get the schedule when it's published or changes, plus a reminder the day before you work. Texts are free to receive but message & data rates may apply — clear the field to stop them.

Save email

Save mobile number

Add an email and/or mobile number to get your schedule automatically.

Add your **email** and/or **mobile number** to receive: the schedule when it's **published or changed** (only when your own week changed), **announcements**, and a **reminder the day before you work**. Clearing a field and saving stops those messages. Texts are standard SMS — message & data rates may apply. Contact info is stored in a separate admin-only table; coworkers never see it.

Part 3 — The Manager Console

Open `manager.html` (the lock icon on the portal header). The console is **desktop-first** — use a laptop for schedule building; on a phone the sidebar becomes a horizontal tab strip.

3.1 Logging in

Manager login: password (1), Unlock (2), and a link back to the staff portal (3).

Enter the manager password (1) and press **Unlock** (2). Behind the scenes this signs into a shared manager account and verifies it against an approved-admin list — a non-approved account is rejected even with a valid password. The session persists on the device until you press **Log out** (top right). All writes are checked server-side, so the password protects every action, not just the screen.

3.2 Layout — the seven tabs

A dark sidebar lists the seven work areas. Click to switch; the active tab is marked with a gold bar:

- **Notes · Specials · Events** — all portal content (3.3)
- **Time Off** — dated schedule entries shown on the portal (3.4)
- **Staff Scheduling** — the weekly shift grids, publish & roster (3.5)
- **Shift Swaps** — review and approve swaps (3.6)
- **Announcements** — email/SMS blasts (3.7)
- **Time-Off Requests** — approve or deny staff requests (3.8)

- **Onboarding** — new-hire submissions (3.9)

3.3 Content: notes, specials, events, info

5

Import CSV: Choose File No file chosen into Memphis Import rows Template
Columns: type, title, date, time, end_date, repeat, repeat_until, details

The Content tab: sidebar (1), location filter chips with counts (2), Add content (3), one row per item with type and location tags (4), CSV import (5).

- 1 Sidebar tabs** — switch work areas.
- 2 Location chips** — All · Memphis · Nashville · Franklin, each with a live count. Filters the list; every item carries its own location.
- 3 Add content** — opens the editor (below) with empty fields.
- 4 Item rows** — colored type tag (note / special / event / info), location tag, title, and a summary line with date, time, repeat and details. Click anywhere on a row (or the Edit button) to edit; the trash button deletes with confirmation.
- 5 CSV import** — bulk-load items into a chosen location. **"Template"** downloads a sample file with the right columns: type, title, date, time, end_date, repeat, repeat_until, details. Rows with a missing title (or a special/event without a date) are skipped as invalid.

What each type does: a **note** is a pinned card on the portal home (no date needed) · a **special** shows in Specials on its day — give it a date, optional time, an end date for a multi-day run, or a Repeat (weekly / biweekly / monthly, optionally "until") · an **event** shows in Events and on the calendar, with the same

date/repeat options — **non-ticketed happenings only** (ticketed events sold on the website arrive automatically via the ticketing API feed and show on the calendar with booking counts; do not re-enter them here) · **info** becomes a "Stuff to Know" card.

The edit window (here: a weekly special). Type (1) and location (2) selectors, repeat controls (3, 4), and Delete (5). Save validates before writing.

3.4 Time Off tab (dated schedule entries)

Despite the name, this tab manages the **dated entries** that appear in the portal's schedule area and calendar — things like "Front of House — Week of Jul 13" or "Deep clean — kitchen." Each entry has a title, date, optional end date, note, and location. Same list/edit/CSV pattern as Content (CSV columns: name, date, end_date, note). Staff **time-off requests** live in their own tab (3.8).

The Time Off tab: dated entries with the same chips + row + CSV layout.

3.5 Staff Scheduling — the heart of the console

One screen shows **all three locations' weekly grids** with shared week navigation (< Prev · Next > · Today). Nashville and Franklin both display the combined shared-pool roster; a shift belongs to whichever grid you add it on.

Shared week navigation for all three grids, with the Mon–Sun label.

Memphis PUBLISHED ✓ 2 Publish & notify 3 Print 4 Copy previous week							
EMPLOYEE	MON 7/13	TUE 7/14	WED 7/15	THU 7/16	FRI 7/17	SAT 7/18	SUN 7/19

Import CSV: Choose File No file chosen into Memphis Import rows Template Columns: name, employee_id, role, active

Employees: Add employee (1) and one row per person (2) with login ID, role, email and mobile. Missing info is called out in red — "no mobile — won't get texts."

The **Employee ID** is what staff type on the schedule page — any text, unique per location, matched case-insensitively. **Email / Mobile** feed publish notifications, announcements, texts and day-before reminders (stored in an admin-only table). Set someone **inactive** to hide them from grids without deleting history. CSV import columns: name, employee_id, role, active.

Tip: Approved time off is matched to grid rows **by employee name** (case-insensitive). Keep roster names identical to the names on time-off records or the OFF badge won't appear.

3.6 Shift Swaps

Swaps staff request from their schedule page land here. A swap that a coworker has **accepted** is also pinned at the top of Staff Scheduling as "Swaps waiting on you":

Swaps waiting on you

A coworker accepted these shift offers — they only take effect once you approve. Approving moves the shift and notifies both employees.

Maya Johnson → Tori Alvarez

Sat, Jul 18 · 10a–3p · Brunch · Memphis

"concert Saturday"

Approve

Deny

Accepted swaps pinned on the Staff Scheduling tab — Approve moves the shift and emails both employees.

Shift Swaps

Staff request swaps from their schedule page. **Waiting on coworker** means the other person hasn't accepted yet — you can still approve directly. Approving reassigns the shift and emails both people.

"concert Saturday"

ACCEPTED — NEEDS APPROVAL

Approve

Deny

Delete

The full Shift Swaps tab: every request with its status. "Waiting on coworker" swaps can still be approved directly by the manager, skipping the peer step.

Approve reassigns the shift to the other employee and emails both people. **Deny** ends the request. **Delete** just removes the record. Statuses mirror what staff see: Waiting on coworker · Accepted — needs approval · Approved · Denied · Declined by coworker · Cancelled.

STAFF SCHEDULING

SHIFT SWAPS

ANNOUNCEMENTS

TIME-OFF REQUESTS

ONBOARDING

New announcement

Emails and texts every active employee (with an email / mobile number on file) at the chosen location, and shows on the staff schedule page.

TITLE

e.g. Holiday hours next week

MESSAGE

Details...

LOCATION

All locations

Send announcement

Quick text (SMS only)

Sends a one-off text to every active employee with a mobile number on file — nothing is posted to the staff page. Staff add their own number on the schedule page under Notifications.

MESSAGE

e.g. We're slammed tonight — anyone free to pick up a shift, text me back!

ALL LOCATIONS

Holiday hours next week

Jul 15, 2026 · 10:00 AM · ☞ sent to 14 · We close at 9pm Mon–Wed next week for the floor refinish. Evening shifts end an hour early.

MEMPHIS

New POS training

Jul 10, 2026 · 08:00 AM · ☞ sent to 6 · Quick 20-minute walkthrough before open on Friday. Coffee on us.

Announcements: title (1), location audience (2), Send (3) — emails and texts every active employee with contact info, and posts to the schedule page. Quick text (4) sends SMS only. Sent history below (5).

- 1 New announcement.** Title + message, choose the audience (All locations / Memphis / Nashville + Franklin), press Send. It emails **and texts** every active employee with contact info on file, and appears in the Announcements card on the schedule page. The result line reports counts ("Emailed 5, texted 4 of 5").
- 4 Quick text (SMS only).** A one-off text blast — "we're slammed, anyone free?" — that is **not** posted to the page. Reports who has no number on file.
- 5 Sent announcements.** History with audience, timestamp, reach and body. the trash button removes one from the staff page (already-sent emails are unaffected).

Time-Off Requests: location selector (1), status badge (2), Approve (3) / Deny (4) / Delete on each request.

Pick the location (1), then act on each request: **Approve** — the days immediately show as red OFF badges on the manager grids, the staff schedule page and the portal calendar, and the shift editor warns if you schedule that person on those days. **Deny** — the request stays visible to the employee with a red badge. **Delete** removes it entirely. You can flip a decision later (an approved request still shows a Deny button, and vice-versa).

Onboarding: the sensitive-data warning (1), status pill (2), and per-submission actions (3) — View ID photo, Mark reviewed, Delete. Click a name to expand the details.

Every submission from the portal's onboarding form appears here, newest labeled **new**. Click to expand all fields — contact info, availability, direct deposit, SSN, acknowledgements, signature — plus a **View ID photo** link when one was uploaded.

Handle with care: this contains SSNs and bank details. The intended flow: enter the data into payroll **Mark reviewed** after payroll is confirmed, **Delete** the submission so sensitive data doesn't linger. Remember the ID photo does not satisfy the federal I-9 — inspect the original document in person.

Quick reference

Access levels

Page	Who	Login	Can do
Staff portal (index.html)	Everyone	None	View notes, specials, events, calendar, reservations (approve/decline requests), Stuff to Know; submit onboarding
Schedule (schedule.html)	Everyone	None	View full weekly schedule + announcements
Schedule — personal cards	Staff	Employee ID (no password)	My week, request time off, offer/accept swaps, set availability, set notification email/phone
Manager console (manager.html)	Managers	Manager password	Everything: content, schedules, publish & notify, swap approvals, announcements & SMS, time-off decisions, onboarding

CSV import cheat-sheet

List	Columns (in order)	Notes
Content	type, title, date, time, end_date, repeat, repeat_until, details	type: note / special / event / info · repeat: none / weekly / biweekly / monthly
Time Off entries	name, date, end_date, note	name + date required
Employees	name, employee_id, role, active	active: active / inactive · employee_id becomes their schedule login

Good habits

- Use each list's **"Template"** button before a CSV import — it downloads a file with the exact columns.
- Keep **roster names** and time-off names identical so OFF badges match up.
- Start each week with **Copy previous week**, adjust, then **Publish & notify** once — staff are only messaged when their own week changed.
- Add **email and mobile** for every employee (or have them add their own on the schedule page under Notifications) so publishes, announcements and reminders actually reach them.
- **Delete onboarding submissions** once entered into payroll — they contain SSNs and bank details.
- Location matters: every item, shift and employee belongs to one location. If something seems missing, check the **location chips / tabs** first.
